

Cálculo III
Integral sobre regiões gerais
Prof. Adriano Barbosa

Integrais sobre regiões gerais

$$F(x,y) = \begin{cases} f(x,y) & \text{se } (x,y) \text{ está em } D \\ 0 & \text{se } (x,y) \text{ está em } R \text{ mas não em } D \end{cases}$$

Integrais sobre regiões gerais

Se F for integrável em R , então definimos a **integral dupla de f em D** por

$$\iint_D f(x,y) \, dA = \iint_R F(x,y) \, dA$$

Se F for integrável em R , então definimos a **integral dupla de f em D** por

$$\iint_D f(x,y) \, dA = \iint_R F(x,y) \, dA$$

Regiões Tipo I

$$D = \{(x,y) \mid a \leq x \leq b, \, g_1(x) \leq y \leq g_2(x)\}$$

Regiões Tipo I

$$\iint_D f(x,y) \, dA = \iint_R F(x,y) \, dA = \int_a^b \int_{g_1(x)}^{g_2(x)} F(x,y) \, dy \, dx$$

Regiões Tipo I

$$\iint_D f(x, y) dA = \iint_R f(x, y) dA = \int_a^b \int_c^d f(x, y) dy dx$$

Observe que $F(x, y) = 0$ se $y < g_1(x)$ ou $y > g_2(x)$

$$\int_c^d F(x, y) dy = \int_{g_1(x)}^{g_2(x)} F(x, y) dy = \int_{g_1(x)}^{g_2(x)} f(x, y) dy$$

Regiões Tipo I

$$\iint_D f(x, y) dA = \iint_R f(x, y) dA = \int_a^b \int_c^d f(x, y) dy dx$$

Observe que $F(x, y) = 0$ se $y < g_1(x)$ ou $y > g_2(x)$

$$\int_c^d F(x, y) dy = \int_{g_1(x)}^{g_2(x)} F(x, y) dy = \int_{g_1(x)}^{g_2(x)} f(x, y) dy$$

(\propto constante)

Se f é contínua em uma região D do tipo I tal que $D = \{(x, y) | a \leq x \leq b, g_1(x) \leq y \leq g_2(x)\}$ então,

$$\iint_D f(x, y) dA = \int_a^b \int_{g_1(x)}^{g_2(x)} f(x, y) dy dx$$

ordem!

Exemplo:

Calcule $\iint_D (x + 2y) dA$, onde $D = \{(x, y) | -1 \leq x \leq 1, 2x^2 \leq y \leq 1 + x^2\}$

Exemplo:

Calcule $\iint_D (x + 2y) dA$, onde $D = \{(x, y) | -1 \leq x \leq 1, 2x^2 \leq y \leq 1 + x^2\}$

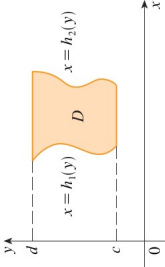

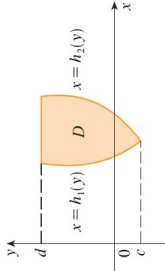

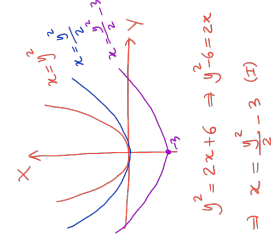

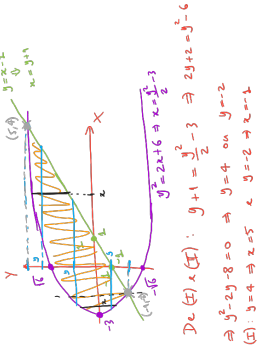

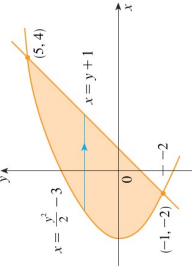

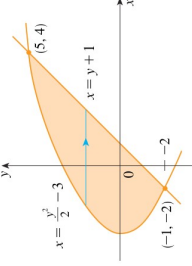

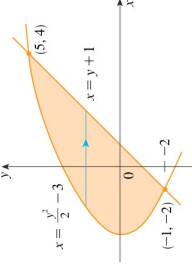

Exemplo:

Calcule $\iint_D (x + 2y) dA = \int_{-1}^1 \int_{2x^2}^{1+x^2} (x + 2y) dy dx$

Exemplo:

$$\begin{aligned} \iint_D (x + 2y) dA &= \int_{-1}^1 \int_{2x^2}^{1+x^2} (x + 2y) dy dx \\ &= \int_{-1}^1 [xy + y^2]_{y=2x^2}^{y=1+x^2} dx \\ &= \int_{-1}^1 [x(1 + x^2) + (1 + x^2)^2 - x(2x^2) - (2x^2)^2] dx \\ &= \int_{-1}^1 (-3x^4 - x^3 + 2x^2 + x + 1) dx \\ &= \left[-3 \frac{x^5}{5} - \frac{x^4}{4} + 2 \frac{x^3}{3} + \frac{x^2}{2} + x \right]_{-1}^1 = \frac{32}{15} \end{aligned}$$

<p>Regiões Tipo II</p> <div style="display: flex; justify-content: space-around; align-items: center;">   </div> $D = \{(x, y) \mid c \leq y \leq d, h_1(y) \leq x \leq h_2(y)\}$	<p>Regiões Tipo II</p> $D = \{(x, y) \mid c \leq y \leq d, h_1(y) \leq x \leq h_2(y)\}$ $\iint_D f(x, y) \, dA = \int_c^d \underbrace{\int_{h_1(y)}^{h_2(y)} f(x, y) \, dx}_{\text{ordenar!}} \, dy$ <p>onde D é uma região do tipo II</p>
<p>Exemplo:</p> <p>Calcule $\iint_D xy \, dA$, onde D é a região limitada pela reta $y = x - 1$ pela parábola $y^2 = 2x + 6$.</p> <div style="display: flex; justify-content: space-around;">   </div>	<p>Exemplo:</p> <p>Calcule $\iint_D xy \, dA$, onde D é a região limitada pela reta $y = x - 1$ pela parábola $y^2 = 2x + 6$.</p> $D = \{(x, y) \mid -2 \leq y \leq 4, \frac{1}{2}y^2 - 3 \leq x \leq y + 1\}$ 
<p>Exemplo:</p>  $\iint_D xy \, dA = \int_{-2}^4 \int_{\frac{1}{2}y^2 - 3}^{y+1} xy \, dx \, dy$	<p>Exemplo:</p>  $\begin{aligned} \iint_D xy \, dA &= \int_{-2}^4 \int_{\frac{1}{2}y^2 - 3}^{y+1} xy \, dx \, dy \\ &= \int_{-2}^4 \left[\frac{x^2}{2} y \right]_{x=\frac{1}{2}y^2 - 3}^{x=y+1} dy \\ &= \frac{1}{2} \int_{-2}^4 y \left[(y+1)^2 - \left(\frac{1}{2}y^2 - 3 \right)^2 \right] dy \\ &= \frac{1}{2} \int_{-2}^4 \left(-\frac{y^5}{4} + 4y^3 + 2y^2 - 8y \right) dy \\ &= \frac{1}{2} \left[-\frac{y^6}{24} + y^4 + 2\frac{y^3}{3} - 4y^2 \right]_{-2}^4 = 36 \end{aligned}$

Exercícios:

- 1 Calcule a integral dupla $\iint_D y^2 dA$, onde

$$D = \{(x, y) \mid -1 \leq y \leq 1, -y - 2 \leq x \leq y\}.$$

Resp: $\frac{4}{3}$

- 2 Calcule a integral dupla $\iint_D x dA$, onde

$$D = \{(x, y) \mid 0 \leq x \leq \pi, 0 \leq y \leq \sin x\}.$$

Resp: π
